

DieAway..... Game Design Document (GDD)

Title: DieAway

Genre: Puzzle / Strategy / Point-and-Click

Platform: Mobile/PC

Target Audience:

Players who enjoy:

- Logic puzzles
 - Strategic movement games
 - Minimalist puzzle experiences
 - Turn-based planning
-

1. Core Concept

The player controls a dice by clicking tiles on a grid-based level.

The dice moves according to the number shown on its **top face**.

Every movement changes the dice orientation, which changes the top number and therefore changes future movement possibilities.

The player must:

- Reach the goal tile
- Stay within the move limit
- Plan movement carefully, using dice orientation

2. Core Gameplay Loop

1. Observe the level layout
2. Check the current top face number
3. Preview possible movement paths
4. Click a direction
5. Dice rolls automatically
6. Dice orientation changes
7. Repeat until:
 - Goal is reached
 - Moves run out
 - Player gets stuck

3. Gameplay Rules

Dice Movement Rules

- The dice always moves in:
 - Up
 - Down
 - Left
 - Right
- No diagonal movement allowed.
- The number on the **top face** determines how many tiles the dice moves.
- The dice rolls physically while moving, changing its orientation.

After movement:

- The top face changes depending on the final orientation.

4. Objective

The player must:

- Reach the end goal tile
- Use limited moves efficiently

Failure conditions:

- Moves reach 0
- No valid movement is possible

5. Mouse Controls

- Left Click - To move Dice

6. User Interface

HUD Elements

- Move Counter- Shows Remaining Moves
- Pause Button
- Restart Button

Path Preview

- Before moving, the game previews the dice path and movement distance in cardinal directions only (no diagonal movement).

7. Level Design

Level Structure

Levels are:

- Grid-based
- Small but strategic
- Focused on planning ahead

Difficulty Progression

Early Levels

- Basic movement
- Dice orientation
- Move counting

Mid Levels

- Tight move limits
- Precision planning

Late Levels

- Complex routing
- Orientation manipulation
- Multi-step planning

8. Core Mechanics

Dice Orientation System

The main mechanic of the game.

Rolling the dice changes:

- Top face
- Future movement distance

Players must think ahead.

Limited Moves

Each level gives a limited number of moves.

This creates:

- Resource management
- Strategic planning
- Puzzle depth

Goal Tile

The level is completed when:

- Dice lands exactly on the goal tile

9. Art Style

The game features a simple neon-themed visual style with clean, minimal environments, glowing UI elements, and bright neon highlights against dark backgrounds.

10. Technical Design

Camera

- Isometric
- Fixed orthographic View

Movement System

- Grid-based movement
- Smooth rolling animation

Path Preview System

When clicking:

- Highlight the predicted path
- Show destination tile

11. Win & Lose Conditions

Win

- Reach the goal tile within the move limit

Lose

- Moves run out
- Invalid position

12. Audio Design

Music

- Calm ambient puzzle music
- Minimal and relaxing

13. Game Feel Goals

The game should feel:

- Strategic
- Satisfying
- Predictable
- Clean and readable

14. Unique Selling Point (USP)

- Simple Gameplay
- Replayability
- Dice orientation itself is the puzzle
- Every move affects future possibilities

15. Game Blockout
